

Mahdi Ahmed

Software Developer (London, UK)

Education

University Of Westminster, London,

BSC Honours - Digital Media Development (Computer Science)

- Object-Oriented Programming (Java): Developed a football league manager with a Java Swing GUI, applying OOP principles such as inheritance, polymorphism, and encapsulation.
- Full Stack Web Development (PHP, MySQL): Built a home technology e-commerce platform with user authentication, product management, and secure checkout functionality.
- UX/UI Design & Usability Testing: Designed mobile web wireframes and interactive mockups for London's Sky Garden, conducting usability testing to refine user journeys.
- Mobile App Development (Swift, SwiftUI): Created an iOS weather application in Xcode using the OpenWeatherMap API to deliver real-time weather forecasts.
- Final Year Project (React Native, Firebase): Built a mobile app for online Arabic language learning, featuring user authentication, interactive lessons, and progress tracking.

Professional Experience

Hackney Islamic Community Centre, Head Developer & Media Management

04/2023 – Present

- Branding & Digital Presence: Designed branding materials and managed social media platforms, strengthening the organisation's online visibility.
- Agile Development: Collaborated in a SCRUM team with testers, a Scrum Master, and developers, participating in daily standups to ensure smooth delivery of projects.
- Digital Solutions Development: Contributed to the design and development of an online school learning platform and inheritance portals, enhancing accessibility for the community.
- Educational Support: Served as a substitute teacher in the institute's school, providing flexibility and support for staff and students.

Projects

Notavox - AI Transcription, (Next.js, Clerk, AWS, Python, Docker, Stripe)

- Full Stack Development: Built a web application enabling transcription of audio/video files in multiple languages with a responsive and modern UI.
- Authentication & User Management: Integrated Clerk for secure user authentication and personalized profile data management.
- AI-Powered Transcription: Deployed a Dockerized Python environment running OpenAI's Whisper model to generate accurate speech-to-text transcriptions.
- Cloud Infrastructure (AWS):
 - S3: Managed file storage for uploads and transcription outputs.
 - Lambda: Automated transcription workflows via event-driven triggers.
 - DynamoDB: Stored transcription metadata and results, enabling user-specific file access.
- Payments & Usage Tracking: Designed a planned Stripe integration for usage-based billing and monitoring AWS service costs.

Uptime Monitor - Website Monitoring,

(Next.js, Clerk, Supabase, Github Actions, Azure)

- Full Stack Development: Built a web application with Next.js for real-time uptime tracking and alerting.
- CI/CD Automation: Designed and deployed a CI/CD pipeline using GitHub Actions, streamlining testing and deployments.

Programming Languages

Python | Java | TypeScript |

JavaScript | HTML 5 | CSS 3 |

SQL | PHP | Swift

Libraries/Frameworks

Node.js | React.js | Next.js |

React Native | Spring Boot? |

Flask?

Tools/Technologies

Git | Github Actions | Linux |

MySQL | Jenkins? | Jira |

Confluence | Docker | Figma |

Vercel

Database systems

AWS - EC2, S3, ECR, DynamoDB,

Lambda | Azure - ACR |

Supabase - PostgreSQL |

Google Cloud - Firebase | MySQL

- **Monitoring & Reliability:** Implemented automated uptime checks via server actions with database updates, integrated with Better Stack for monitoring and incident alerting.
- **Authentication & Data Persistence:** Secured user authentication with Clerk and managed persistent application data with Supabase.
- **Cloud Deployment:**
 - **Vercel:** Hosted frontend with seamless integration.
 - **Azure Container Apps:** Deployed **Dockerized monitoring service**, ensuring reproducible builds and scalable workloads.
