👤 Profile

Experienced Cloud and DevOps Engineer with expertise in AWS and Azure, dedicated to delivering scalable and robust cloud solutions. Led projects from infrastructure overhaul to the deployment of a critical healthcare testing platform, showcasing strong leadership in guiding teams and mentoring junior engineers. Demonstrates a proactive approach to solving client challenges through innovative DevOps practices and continuous improvement.

🧠 Skills

AWS — EC2, S3, SNS, API Gateway, Lambda, DynamoDB, WAF

Git

Terraform

Linux

Kubernetes

CI/CD — GitHub Actions, Jenkins, Azure DevOps

Docker

Python — Scripting, OOP

Bash

Azure

Agile Methodologies

Networking Concepts

📁 Professional Experience

CoderCo Bootcamp

DevOps Engineer Graduate

- Successfully completed a comprehensive DevOps bootcamp with CoderCo.
- Gained proficiency in Linux fundamentals and command-line interface.
- Mastered Git and GitHub for version control and code management.
- Acquired in-depth knowledge of networking concepts, including subnetting and OSI model.
- Learned to automate infrastructure management using Terraform.
- Gained practical experience with Docker for containerisation.
- Achieved proficiency in Kubernetes for managing containerised applications.
- Implemented CI/CD pipelines using GitHub Actions.
- Engaged in live events, webinars, and mentorship for continuous learning.
- Collaborated with a supportive community of aspiring DevOps professionals.

📁 Projects

Project 1

Implemented GitHub Actions to automate Terraform deployments on AWS, including CI/CD pipelines and secure IAM configurations for EC2 provisioning.

Project 2 (Creative name)

Created a modularised 3-tier architecture on AWS. The architecture creates the VPC, Public, Private, and Database, subnets, Internet and NAT gateways, Elastic IPs, and a bastion host.

- High availability is implemented by having a multi-az setup.
- Implemented a trunk-based Development Strategy

Project 3 (Automation)

Created an end-to-end Azure DevOps pipeline to build, test and deploy nextJS applications in parallel.

- Containerise the nextJS applications, build and push images to ACR
- Deploy app onto Azure App Service - created the infrastructure using ARM templates
- Used a trunk-based development strategy

Certificates

AWS Certified Cloud Practitioner 

HashiCorp Terraform Associate 

Azure Fundamentals 

Education

BSc Digital and Technology

University of Roehampton
